

1. What is BROWAVE AMS?

Think of **BROWAVE AMS (Accommodation Management System)** as our company's digital front desk or hotel manager. Instead of using paper logbooks or confusing spreadsheets, this system helps us keep track of:

- **Departments:** Which company team every worker belongs to.
- **Buildings & Rooms:** Which dorms, floors, and rooms are available or occupied.
- **Room Assignments:** Who is staying where and when they moved in.
- **Meals & Transport:** Daily cafeteria meal counts and company car schedules.

KEY RULE TO REMEMBER

The system works like a real building: you can't assign a person to a room that hasn't been built yet, and you can't assign a worker who isn't attached to a department!

2. Setting Up Your Map: Departments & Buildings

2.1 Creating Departments

Departments are the home bases for your staff (like *Admin*, *MR*, or *Finance*).

STEP 1 Open the Menu

Click on **Management** in the left menu bar, then click **Departments**.

STEP 2 Add New Department

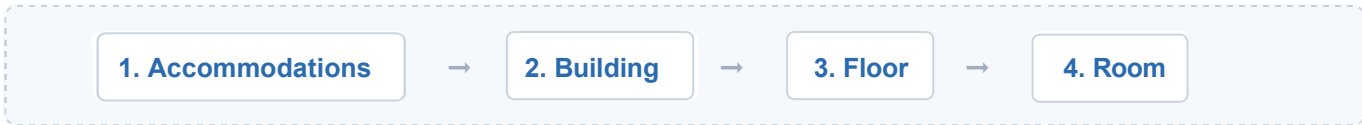

Click the blue **Add Department** button near the top right of the screen.

STEP 3 Fill in Details

Type in the Department Name (e.g., *ADM*) and a short code. Click **Save**.

2.2 Understanding Buildings and Rooms

The system organizes physical housing in a clear step-by-step order:

2.3 Fast Room Creation Tool ("Generate Multiple Rooms")

If you have a brand-new floor with 50 empty rooms, don't waste time typing them one by one! Use the **Generate Multiple Rooms** tool inside the Floor view:

- **Prefix:** Add a letter before room numbers if you like (e.g., A-).
- **Start Number:** Set where to start (e.g., 101).
- **Room Count:** Choose how many rooms to create (e.g., 20).

3. Adding Workers (Bulk Upload Guide)

When onboarding a large group of new employees, you can upload them all together using a single spreadsheet.

STEP 1 Get the Official Template

Go to the **Employee Dashboard** and click **Download Template**. Always use this official template file.

STEP 2 Fill in Your Spreadsheet

Add names, worker IDs, and department codes. **Important:** The *Department Code* in your file must match a department already created in the system!

STEP 3 Save as UTF-8 (For Special Characters)

If your spreadsheet includes Traditional Chinese characters or special symbols, make sure to select **CSV UTF-8** when saving.

STEP 4 Upload & Check

Drag your file into the upload box. The system will double-check for duplicate IDs and warn you if anything looks wrong. Click **Confirm** to finish.

4. Room Assignments & Moving Residents

4.1 How to Check an Employee into a Room

1. Click **Room Assignments** in the menu.
2. Search for the employee by typing their name or ID number.
3. Pick an available empty room from the list.
4. Select their move-in date and click **Confirm Assignment**.

4.2 How to Transfer a Resident (Moving Rooms)

When an employee needs to move to a different room or building:

1. Open the employee's profile page.
2. Click the **Transfer** button.

3. Select their new room.

AUTOMATED CHECKOUT FEATURE

You don't need to manually check them out of their old room! The system automatically frees up their old room, marks it as ready for cleaning, and registers them in their new room at the same time.

5. Company Cars & Daily Meals

5.1 Fleet Management (Company Vehicles)

The vehicle tracking section is split into two easy tabs:

- **Active Tab:** Shows all company vehicles currently on the road, who is driving, destination routes, and return times.
- **Archive Tab:** Stores past history records, completed trips, driver logs, and vehicle repair history.

5.2 Automatic Kitchen Meal Counts

No more counting meal tickets or calling floor managers! The system automatically calculates how many meals the cafeteria kitchen needs to cook each day based on:

Active Room Occupants + Work Shift Schedule = Kitchen Meal Count

6. Common Mistakes & How to Avoid Them

WHAT YOU WANT TO DO	RULE TO FOLLOW FIRST	WHAT HAPPENS IF YOU SKIP IT?
Add a new room	Make sure the Building and Floor exist first.	The system won't let you save the room.
Add a new employee	Make sure their Department exists first.	The system will highlight the missing department field in red.
Delete a Department	Move all staff out of that department first.	Error Message: Cannot delete a department that still has staff in it.
Delete an Employee	Check them out of their room first.	Error Message: Cannot delete an active resident. Complete checkout first.
